. . ? A: Where did you get the id? It is impossible that anyone has given you one, even if your current one expires. You either have the original from the shipping or from your retailer's back-end. You can't use one that is only stored in your computer (for lack of a machine that is good at generating one). Hepatic microvascular hemodynamic regulation: an in vivo model. The aim of this study was to develop a new method for investigating microvascular hemodynamic regulation. A new technique for producing a 1-mmHg norepinephrine-induced reduction in hepatic arterial blood flow, without affecting hepatic venous pressure, has been developed. Experiments were performed in dogs that had a catheter (2F) in the portal vein, a hepatic portal catheter in the left lateral lobe, and a catheter (2F) in the hepatic artery. Catheters were flushed with heparinized blood. Arterial blood flow was measured by electromagnetic flow probe and hepatic arterial blood flow by colored microspheres. Portal and hepatic venous blood flows were measured by indwelling catheters. Arterial norepinephrine infusion was begun at 0.1 microgram/kg/min for 10 minutes, then 0.01 microgram/kg/min for 20 minutes. Norepinephrine induced a decrease in hepatic arterial blood flow from 38.0 +/- 3.0 to 30.4 +/- 2.3 ml/min/100 g (p less than 0.01), and a decrease in hepatic venous pressure from 11.0 +/- 0.5 to 8.4 +/- 0.3 mmHg (p less than 0.001). Portal venous blood flow increased (100.0 +/- 6.4 to 117.7 +/- 6.3 ml/min/100 g, p less than 0.01). In 6 additional dogs, norepinephrine was given at doses of 1, 2.5, 5, 10, 20, and 40 micrograms/kg/min. Norepinephrine induced a dose-related decrease in hepatic arterial blood flow. This new technique is suitable for investigating the acute hepatic microvascular hemodynamic response to various stimuli.Q: how to store the HTML code in database?
